

## MAKE SURE THAT YOUR USE OF THE IPPK APPLICATION IS SECURE AND PROTECTED AGAINST CYBERATTACKS

Dear Sir or Madame,

We encourage you to enable the **two-factor authentication functionality** for the IPPK Application login process.

The double verification method has already become a market standard, which **enhances security and provides protection against cyberattacks**. The IPPK Application has offered this functionality for over a year now.

### How does it work?

When logging into the IPPK Application, in addition to an identifier and password, you will be asked by the two-factor authentication system to enter **a one-time authorisation code** generated by the authentication tool of your choice (e.g. Duo, Google Authenticator or Microsoft Authenticator). You can download an authentication app and install it on your mobile device (smartphone, tablet) free of charge.

**With the safety of your organisation in mind, we encourage you to enable the two-factor authentication functionality today.**

### Note!

**As from September 2023**, this method of authorisation will be **mandatory** for all users of the IPPK Application.

By enabling the functionality today, you are securing **undisrupted continuation of processes** related to the handling of Employee Capital Plans (PPK).

Details of the two-factor authentication can be found in:

- Onepager - Two-factor authentication in IPPK, available [here](#)
- Tutorial: Two-factor verification – part 1: Enabling the functionality [here](#)
- Tutorial: Two-factor verification – part 2: Configuration and login [here](#)

**Let's take care of the security of PPK Participants' data together!**

Yours faithfully,  
PKO TFI Team
